Fluorinated Specialty Grease

CHARACTERISTICS

Tribolube-26N is a wide temperature range, extreme pressure, antiwear, antirust, non-migrating grease. It has a low foreign and/or opaque particle count and a high resistance to microwave energy. This grease is capable of performing at temperatures as high as 450°F for long durations. Tribolube-26N meets the performance requirements of MIL-PRF-83261.

APPLICATIONS

Aircraft actuators, gears, gimbal rings, oscillation bearings, antifriction and plain spherical bearings. It is especially suit-

able for use in applications using miniature bearings. Blower motors, motor generators, plastic clutches and gears, servo motors, microwave ovens, speedometer cables, motorcycle and automotive distributors, typewriters, business machines, etc. Other applications include subfractional horsepower gear motors, camera drive systems, microswitch assemblies, reduction gears, and scientific instruments. Tribolube-26N is suitable for use in edge board and twist lock connections, twist pins and other applications involving electrical contacts and connectors where very high engagement forces are prevalent.
